INTRODUCTION

The Student Grade Calculator is a simple React.js application that calculates a student's percentage and grade based on marks entered for three subjects. The main objective of this project is to understand the fundamentals of React such as components, state management, event handling, and conditional rendering.

The user enters the marks of three subjects, and when the Total button is clicked, the application calculates the overall percentage and displays the corresponding grade according to predefined grading criteria. A Reset button is also provided to clear all inputs and results.

This project demonstrates how React can be used to build interactive and dynamic web applications with minimal code.

INPUT CODE

```
//Students Grades Calculator
import React from 'react';
import {useState} from 'react';
import './Sample.css';

export default function Sample(){

  const[marks,setMarks]= useState(" ");
  const[grade,setGrade]= useState(" ");

  function CalculateGrade(){
    let sub1=Number(document.getElementById("sub1").value);
    let sub2=Number(document.getElementById("sub2").value);
    let sub3=Number(document.getElementById("sub3").value);
    let total = sub1 + sub2 + sub3;
    let avg = (total/300)*100;
    setMarks(avg);

    //Grades logic
    if (avg >90 && avg <=100) {
      setGrade("Grade A+");
    }
    else if (avg >80 && avg <=90){
      setGrade("Grade A")
    }
    else if (avg >70 && avg <=80){
      setGrade("Grade B+")
    }
    else if (avg >60 && avg <=70){
      setGrade("Grade B")
    }
    else if (avg >50 && avg <=60){
      setGrade("Grade C+")
    }
    else if (avg >40 && avg <=50){
      setGrade("Grade C")
    }
    else if (avg >35 && avg <=40){
      setGrade("Pass")
    }
    else{
```

```

        setGrade("Fail")
    }
}

return(
    <div>
        <h1 style={{textAlign:"center",color:"LightBlue"}}
        >Student Grade Calculator</h1>
        <br />
        <label>Sub1 marks:</label>
        <input id="sub1" type="number" placeholder='Enter sub1
marks'></input><br/><br/>
        <label>Sub2 marks:</label>
        <input id="sub2" type="number" placeholder='Enter sub2
marks'></input><br/><br/>
        <label>Sub3 marks:</label>
        <input id="sub3" type="number"
placeholder='Enter sub3 marks'></input><br/><br/>
        <p>Marks:{marks}</p>
        <p>Grade:{grade}</p>
        <button className="btn-total" onClick={CalculateGrade}>Total</button>
        <button className="btn-reset" onClick={() => {
            setMarks(" ");
            setGrade(" ");
            document.getElementById("sub1").value = " ";
            document.getElementById("sub2").value = " ";
            document.getElementById("sub3").value = " ";
        }}>Reset</button>
    </div>
)
};

```

OUTPUT CODE

Student Grade Calculator

Sub1 marks:

Sub2 marks:

Sub3 marks:

Marks:

Grade:

Total

Reset

CONCLUSION

The Student Grade Calculator is a simple and effective React.js application that automates the process of calculating a student's percentage and grade. It provides a user-friendly interface where users can enter marks for three subjects and instantly view the calculated result. This project demonstrates the use of React concepts such as functional components, the useState hook, event handling, and conditional rendering to create an interactive web application. Overall, the project helped in understanding the basics of React development and serves as a strong foundation for building more advanced applications in the future.
