INTRODUCTION

The ATM Interface is a simple and user-friendly web application designed using HTML and CSS. It simulates the main screen of an ATM machine, allowing users to access banking services such as cash withdrawal, deposit, payments, credit card services, account settings, and quick cash options. The interface is designed with a clean layout, organized buttons, and easy navigation to provide a realistic ATM experience. HTML is used to structure the content, while CSS is used to enhance the visual appearance, including colors, spacing, alignment, and responsive design.

INPUT CODE

```
<html>
  <head>
    <title>ATM Interface Design</title>
  </head>
  <style>
    .parent{
      background-color: rgb(53, 53, 116);
      width: 600px;
      height: 500px;
      margin-left: 350px;
      border-radius: 20px;
      box-shadow: 2px 4px 8px black;
    }
    h2{
      color: white;
      padding-top: 5px;
      padding-left: 10px;
    }
    .c1{
      display: flex;
      justify-content: space-around;
      gap: 200px;
    }
    p{
      color: white;
      padding-top: 20px;
    }

    h5{
      color: white;
    }
    span{
      color: skyblue;
    }
    .c2{
      display: flex;
      justify-content: space-around;
      margin-top: 20px;
    }
    button{
      width: 150px;
      height: 60px;
      margin-top: 15px;
```

```

    }
    .c3{
        display: flex;
        justify-content: space-around;
        margin-top: 15px;
    }
    .c4{
        display: flex;
        justify-content: space-around;
        margin-top: 15px;
    }
    .b1{
        background-color: blue;
        border: none;
    }
    .c5{
        margin-left: 180px;
        margin-top: 30px;
    }
    }
    .b2{
        width: 380px;
        height: 60px;
        background-color: rgb(153, 51, 51);
        border: none;
        color: white;
    }
    .s1{
        margin-left: 120px;
        color: white;
    }
    }
    h1{
        text-align: center;
    }
}

</style>
<body>
<h1>ATM Interface</h1>
<div class="parent">
    <div class="c1">
        <h2 class="A1">ATM HDFC</h2>
        <p>Card Return</p>
    </div>
    <div class="c2">
        <h5><span>Welcome</span><br> Harshith</h5>
    </div>
</div>

```

```

        <button>Get Cash</button>
        <button>Deposit</button>
    </div>
    <div class="c3">
        <h5><span>Account#1</span> <br> $500</h5>
        <button>Payments</button>
        <button>Credit Card</button>
    </div>
    <div class="c4">
        <h5><span>Savings#2</span> <br> $750</h5>
        <button>Account Settings</button>
        <button class="b1">Others</button>
    </div>
    <div class="c5">
        <button class="b2">$50 <span class="s1">Quick Cash</span></button>
    </div>

</div>

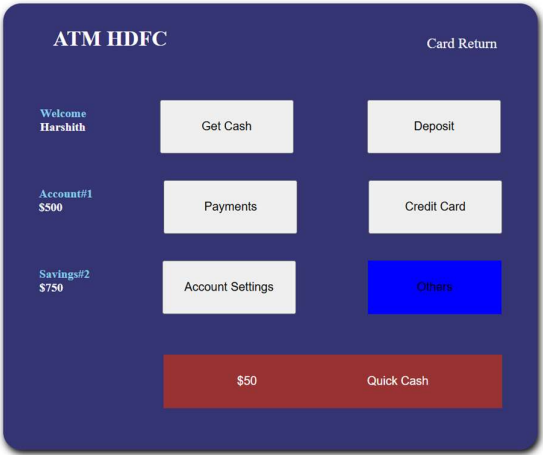

</body>
</html>

```

OUTPUT CODE

ATM Interface

CONCLUSION

The ATM Interface project demonstrates how HTML and CSS can be used to create an attractive and functional banking interface. The design provides easy access to essential ATM services through a simple and organized layout. This project helped in understanding web page structure, styling techniques, button design, and user interface development, making it a useful beginner-level web development project.
